Abstract (Basic): JP 8164301 A

Surfactant soln is concentrated by flash evapn. It is sepd. into vapour and conc. soln. A part of the conc. soln. is circulated and mixed with raw surfactant soln. The mixt. is concentrated by flash evapn. The ratio of the conc. soln. circulated back to the raw surfactant soln. maintained above 8.

The surfactant soln. pref. contains alpha-SF, 1-12C alcohol, and water.

USE/ADVANTAGE - Used for conc. alpha-sulpho fatty acid alkyl ester (alpha-SF) surfactant soln. Higher concn. alpha-SF free of alcohol and odour can be recovered economically.

In an example 100 pts. wt. alpha-SF, 30 pts. wt. MeOH, and 8.6 pts. wt. 35 % H2O2 were mixed at 809 deg.C for 20 min. 13.6% NaOH soln. was added to neutralise the mixt. at pH 7. The obtd. aq. soln. contg. alpha-SF was concentrated by flash evapn. at 120 deg.C; 60 % alpha-SF conc. soln. contg. 0.9 wt.% of alcohol was obtd.
